Job Description

Work Site: Seongnam City, South Korea (on-site)

Application Architect of the Company Sales Portal System is responsible for providing business analysis and system design to enhance the current system with developers and business users for established initiatives within a company. Application Architect will plan, establish, and manage information technology enhancement and will serve as a liaison between the business and technical aspects. The role will primarily involve analyzing and evaluating systems. Devises system programs and related procedures to process data. Encodes, tests, debugs, troubleshoots, and collaborates with developers to enhance the Sales Portal System.

- Conducting a thorough analysis of operational, technical, and systemic requirements and any required modification to maintain the engineering tools infrastructure
- Gather essentials and process them for business needs
- Generate related documentation (e.g. scope, objectives, requirements, schedule, and status)

- Generate reports and charts to keep leadership and stakeholders apprised of progress
- Works on different database management systems efficiently
- For assigned enhancement, define and document scope, requirements, deliverables, and stakeholders and prepare high-level plans
- Understanding SQL and information management best practices
- Working closely with the customer and other engineers to ensure system requirements are met
- Providing timely and accurate information and status updates to leadership, project sponsors, end users, and management
- Responsible for the following: development of enhancement milestones, and schedules, tracking the design, development, and testing progress of the enhancement, documenting and tracking issues and risks, communication of enhancement status to management
