Company: Calibro Corporation

Location: Ho-Ho-Kus, New Jersey

Category: other-general

Job Description:

Mainframe CICS Systems Engineer- contract, fully remote

Overview: We deliver shared technology services and support all business applications and end users. Our team provides capabilities for all stages of software development lifecycle, enabling productive coding, functional and integration testing, application releases, and ongoing monitoring and support for over hundreds of production applications. We ensure application and end user functions are delivered on a scalable, secure, and reliable infrastructure composed of seamlessly integrated datacenter, network, compute, cloud, storage, and database functions.

Our mainframe team is a technology enabler for the business by providing a strong, resilient, and stable platform to host and enable business innovation/growth in our lines of business and global locations. The team consists of experienced administration, operations and

engineering staff required to support the platform. The mainframe engineers work with the latest hardware and software technologies. The IBM z platform and the mainframe disk and tape technologies are frequently refreshed across our datacenters.

The Mainframe CICS Systems Programmer is responsible for all phases of CICS engineering, system and software maintenance, and CICS related operation functions. In order to be considered for this role you must be comfortable working with CICS (and MQ) in an enterprise scale Sysplex and CICSplex environment. The CICS engineer must have strong analytical, organizational and communication skills, as well as in-depth knowledge in CICS performance & tuning, debugging and dump analysis.

Required experience:

A minimum of ten years working as a CICS Systems Programmer / Engineer

Knowledge of all CICS parameters that control performance in a CICSplex environment.

Knowledge of SMP/E, software upgrade and maintenance

In depth knowledge of CICS SMF record structure and the CICS Performance Analyzer tool to gather statistics for tuning CICS regions

Experience with CICSplex SM implementation & customization, dynamic transaction routing, etc.

Ability to perform problem determination, dump analysis and performance tuning.

Experienced with the CICS monitoring tools Sysview.

Knowledge of Cobol to support application developers.

Experience with Mainframe WebSphere MQ

Desired / preferred experience

Assembler and COBOL coding and knowledge of CICS Exits

Web application support in a CICS TS V5 environment

Knowledge of zOS facilities such as: APF, Linklist, VSAM, LPA, Coupling Facility

Experience with CICS Interdependency Analyzer tool.

Working knowledge of the zOS & CICS Explorer

Knowledge of Natural language & Adabas

Prior Application programming experience
