Company: Photon

Location: United States

Category: computer-and-mathematical

We are looking for a strong mobile app developer who welcomes both engineering and maintenance tasks. The primary focus will be to implement new user interfaces and features together with automated unit and integration tests.

You will be working with our candid and collaborative team, where your knowledge and advice about application architecture and the newest mobile technologies will be highly appreciated. The code you write will need to be cleanly organized and of the highest quality. You'll also help ensure solid application performance and an excellent user experience.

Recipe for Success - What's "in store" for the role

Developing new features and user interfaces from wireframe models

Ensuring the best performance and user experience of the application

Fixing bugs and performance problems

Writing clean, readable, and testable code

Cooperating with back-end developers, designers, and the rest of the team to deliver well-architected and high-quality solutions

The Essentials in Your Cart - The required ingredients

8+ years of experience developing mobile applications for iOS

Extensive knowledge about mobile app development. This includes the whole process, from the first line of code to publishing in the store(s)

Deep knowledge in iOS app development

Proficiency in Swift

SwiftUI, Combine, MVVM experience

Proficiency with writing automated tests in Jest, JUnit, Espresso, Mocha, etc

Proficiency in BitBucket/GitHub/GitLab

Familiarity with Core Data, Core Animation, and other IOS frameworks

Familiarity with Apple design principles

Familiarity with RESTful APIs, GraphQL and mobile libraries for networking

Familiarity with the JSON format

Experience with profiling and debugging mobile applications

Familiarity with push notifications

Extra Spices - What you should bring to the table

Experience using Firebase

Familiarity with React Native or Flutter

Proficient in Unix/Linux environments
