Company: HexaQuEST Global

Location: United States

Category: architecture-and-engineering

Job Description

Important Information:

This position is on site and can be performed from any of the below locations. The company offers relocation support to any of those locations if required.

Eddyville, IA

Dayton, OH

Fort Dodge, IA

Memphis, TN

Job Purpose and Impact:

Looking for a chance to use your experience in rotating equipment, seals, piping, pumps, fans, blowers, and material handling equipment?

Want to work for a company that will help you build your skills as an engineer?

As a Mechanical Reliability Engineer, you will apply technical knowledge to deliver continuous improvement in principles and problem-solving techniques in asset reliability through the detection and elimination of defects. You will repair and perform preventive maintenance to ensure the most efficient operation while taking a proactive approach to new equipment

installations. In this role, you will partner with the team on tasks ranging from simple part replacement, advanced troubleshooting, and preventive/predictive maintenance, ensuring that equipment is properly configured and/or set up.

Key Accountabilities:

Implement moderately complex reliability excellence activities and identify and prioritize reliability engineering value creation opportunities.

Execute the development, design, and installation of predictive maintenance programs and technology in alignment with the area procedures.

Prepare technical reviews of moderately complex projects and collaborate with related areas on new equipment reliability specifications.

Perform the identification and elimination of bad actors and the optimization of equipment availability.

Collaborate with and provide guidance to maintenance repairs and production in reliability-related processes and the identification of critical spares.

Independently solve moderately complex issues with minimal supervision while escalating more complex issues to appropriate staff.

Other duties as assigned

Qualifications:

Minimum Qualifications:

Bachelor's degree in a related field or equivalent experience

Minimum of two years of related work experience

Preferred Qualifications:

Knowledge in maintenance process management

Background in rotating equipment, seals, piping, pumps, fans, blowers, and material handling equipment.

Experience creating complex tests and analysis.

Predictive maintenance technologies experience.

Experience with SAP.
