

Entry Level Java Software Engineer - Remote

[Apply Now](#)

Company: iboss

Location: United States

Category: computer-and-mathematical

Description

Company Overview

iboss is a cloud security company that enables the modern workforce to connect securely and directly to all applications from wherever they work. Built on a containerized cloud architecture, iboss delivers security capabilities such as SWG, malware defense, RBI, CASB and data loss prevention to all connections via the cloud, instantaneously and at scale. This eliminates the need for traditional network security appliances, such as VPNs, firewalls and web gateway proxies, which are ineffective at protecting a cloud-first and mobile world.

Leveraging a purpose-built cloud architecture backed by 230+ issued and pending patents and more than 100 points of presence globally, iboss processes over 150 billion transactions daily, blocking 4 billion threats per day. More than 4,000 global enterprises trust the iboss Cloud Platform to support their modern workforces, including a large number of Fortune 50 companies. To learn more, visit .

Job Description

As a **Software Engineer** at iboss, you'll have the opportunity to work on multiple technologies. Our development scope extends from device specific driver, service, and communication protocols to cloud scalable connectivity and big data processing through third-party analytics tool integration and customer enterprise UI creation for security policy management. The pace is fast. The process is agile.

This is an excellent opportunity to become a core member of a rapidly growing software

development team. There are many exciting projects on which to work. iboss software developers excel at solving tough problems, collaborating well, and working with customer teams to rapidly deploy solutions.

Responsibilities
