Design and code integration components including plug-ins and programs that call the GW APIs

Work closely with business stakeholders to build high-throughput systems

Work in a collaborative environment by occasionally pair and/or mob programming

Create form and letter templates and their supporting XML descriptor files

Communicating with Engineering Managers and Product Owners to build technical solutions

Work in a cadence of two-week sprints with daily stand-ups and bi-weekly retrospectives

Configure operational parameters such as roles and permissions, user attributes, etc.

Participate in design and code reviews

Create new data model elements and extend application data model

Grow subject matter expertise in programming, product, and platform

Required Knowledge:

Guidewire Cloud or v10 Expertise

5+ years of Java programming / Gosu programming

Knowledge of Microservice based architecture patterns

Knowledge of RESTful API design

Demonstrate technical know-how through individual contributions and programming exercises

Strong oral and written communication skills to create a productive communication environment with team members and stakeholders

Experience with XML

Preferred Experience: Skills and Knowledge

Bachelor's Degree in Computer Science or related field

Guidewire Certification(s)

Knowledge of Java

Knowledge of the Guidewire Platform

Analysis skills for technical problems and solutions of high risk

Experience with SQL? relational database engines and relational database design?

Understanding of quality assurance and testing procedures, processes, and techniques

Knowledge of TDD/BDD frameworks

Experience in Object Oriented modeling, analysis, design, and programming

A continuous learning mindset that keeps you current on development best practices and trends

Desire for a deep technical understanding for the problems at hand
