## Lean Manufacturing Engineer - High Growth Company

[Apply Now](#)

Company: The Avery Point Group, Inc - Executive Search Catalysts for Change™

Location: United States

Category: other-general

Lean Manufacturing Engineer Why You Should Be Interested in This Role: We are seeking a Lean Manufacturing Engineer to lead key projects and initiatives and report directly to the VP of Operations for a fast-growing, market-leading commercial products company. In this role, you will play a pivotal role in shaping the future of my client's manufacturing processes. Your expertise will drive efficiency, reduce costs, and ensure the highest quality of our client's products. This role is not just about maintaining the status quo but about pushing boundaries, implementing Lean Manufacturing principles, and fostering continuous improvement.

Company: Confidential Position: Lean Manufacturing Engineer Compensation: Excellent Base and Bonus Compensation Relocation: Local Candidates are Preferred - Relocation Available for the Right Candidate Company Profile: Our client is an industry leader committed to product innovation and engineering excellence. They seek a Lean Manufacturing Engineer who can maximize efficiency by analyzing equipment layout, workflow, assembly methods, and workforce utilization using Lean Manufacturing concepts and other continuous improvement methods. This person will be responsible for reducing costs while safely building a quality product.

NOTE: You MUST be Authorized to work in the US without the need for sponsorship now or in the future.

Key Responsibilities: Lead initiatives to enhance manufacturing efficiency through Lean Manufacturing and continuous improvement practices. Development of value stream maps, defining current state and developing future state, then driving execution towards the future state by leveraging Lean Manufacturing principles, eliminating waste, and improving Quality. Lead development and design of assembly fixturing, poka yoke assembly jigs, and assembly conveyance devices to support flow,

ergonomics, and quality while improving efficiencies. Collaborate with cross-functional teams to ensure safety, quality, and engineering standards are met. Support facility layouts and manufacturing process improvements. What We're Looking For: A Bachelor's Degree in Industrial Engineering or a related field. 5-7 years of experience in manufacturing engineering, with a preference for those holding Project Management and Lean Manufacturing certifications. Proficiency in MS Office. Exceptional problem-solving, critical thinking, and communication skills.
