Company: F2Onsite

Location: Atlanta, Georgia

Category: architecture-and-engineering

Mainframe Engineer - Remote (East Coast)

12 months with temp to hire potential

On-Call and weekend availability required

Remote within traveling distance of Atlanta, GA for quarterly meeting.

### Job Description

Opportunity for 2 highly motivated self-starters as Mainframe Systems Engineers to oversee

and administer corporate mainframe environment in an Enterprise environment

The successful candidate will be proficient working in and supporting a Parallel Sysplex mainframe environment, be familiar with mainframe performance management and tuning, work well with vendors and hardware providers, ramp up quickly on large projects, work independently to understand business needs, and design solutions to produce high availability environments

The candidate's primary responsibilities will include software installation, product support, and zOS administration

The candidate's secondary responsibilities will include working in the Sysplex environment including both hardware and software support duties, execution of projects to implement new hardware and software, and on-call support

## Responsibilities

Install, maintain, and support mainframe infrastructure and software

Monitor and manage mainframe performance

Coordinate with hardware and software vendors for support and future project work

Create comprehensive documentation, conduct thorough testing, and follow defined change control processes

Provide support for mission critical application infrastructure and products

Effectively communicate with end-users, application programmers, co-workers, managers, and other stakeholders

Demonstrate a high level of initiative and attention to detail during daily operations

#### Skills Required

Minimum of 4YR's experience with mainframe hardware and software support

Minimum of 4YR's experience with mainframe third party software installation and support

Minimum of 4YR's experience with Cobol, JCL, and JES2

Experience with mainframe capacity planning and performance tuning

Experience writing test scripts and performing testing/verification of products/deliverables

High level of initiative and attention to detail

Familiarity with mainframe application development (IDE) build tools

Strong analytical and problem-solving skills

Excellent customer support skills

Excellent verbal and written communication skills

## Skills Preferred

Assembler and REXX experience is a plus

Familiarity with various Infrastructure software solutions, change management, scheduling, performance monitoring, etc. (ex. Zeke, Zebb, ISPW, TMON, JCLPrep, QuickRef, SAS)

Experience using, configuring, and providing support of storage subsystems and infrastructure

Experience with maintaining and operating in a Parallel Sysplex environment including sharing of DASD

Familiarity working with and maintaining a Coupling Facility

Familiarity with support of Unix System Services and zOS operating system

Familiarity with ITIL based ticketing system from a user perspective for change, incident, and problem management

## Education

4-yr College Degree preferably Information Systems or Computer Science or 6-8 years of experience in the field

## Additional Information

All candidates are encouraged to apply, but many positions require a strict drug and background check by our customers.

F2OnSite supports and adheres to all state laws regarding background checks.

This position requires specific work hours to be adhered to. Typically the work hours are not flexible, so you must be able available to work during those hours.
