Company: FSI Services

Location: United States

Category: architecture-and-engineering

The best CMMS for healthcare maintenance professionals.   QA Engineer About Us: At FSI, you'll join a team of passionate professionals dedicated to empowering efficient and safe hospital operations. FSI supports over 400 million ft of hospital space every year to run transformative, intelligent hospital maintenance operations. FSI is the most comprehensive computerized maintenance management software (CMMS) provider for healthcare, and we're proud to serve over 1,000 hospitals with some of the largest networks in the country -- including Atrium Health, UPMC, Yale New Haven, SSM Health UNC Health, and many others. We work directly with our customers to build customized modern technology that fits their complex needs. In 2020, FSI received significant investments to grow and expand on the foundation established since the company began in 2002. We believe our most exciting chapter is just beginning, and we're looking for talent that wants to make an impact. If you're looking for a fast-paced, innovative community with a team focused on collaboration and empowerment through technology, we encourage you to get in touch. Your role: The Quality Assurance (QA) Engineer is responsible for designing, developing, and executing testing procedures and tools to ensure the quality of our software applications. You will be responsible for analyzing the performance, functionality, and presentation of applications and designing tests to validate they meet FSI's high standards for quality and performance. These tests include both manual and automated tests. Duties include identifying, documenting, and analyzing any bugs and errors found during all phases of the STLC (Software Testing Life Cycle); this includes gaps between requirements and the software as developed. The QA Engineer works closely with Developers to identify and rectify bugs and functional shortcomings

or our software. The QA Engineer also plays an important role as gatekeeper, ensuring only the highest quality software is released for our customers' use. Successful candidate will have excellent troubleshooting and problem-solving skills. Excellent communication and interpersonal skills are a must. Candidate should work equally well independently and in a collaborative team environment. Your responsibilities: Develop and execute test plans, scripts, and procedures (manual and automated) Research and implement new automation tools and methodologies. Integrate automation frameworks with CI/CD tools such as Azure DevOps Validate user experience and recommend UX improvements. Strong voice in whether a product release is ready - is a gatekeeper from a perspective of quality. Prepare documents that outline testing processes, generating use cases to ensure testing captures application functional requirements. Develop test automation, API and performance testing frameworks from an end-to-end standpoint, including front-end, middle-tier and back-end services and databases. Establish a structured test methodology, leveraging modern test frameworks such as BDD and TDD. Lead and mentor QA team members as well as manage outside contract testers. Ability to work independently and in a team environment. Performing other duties as assigned. What you'll bring to the team: Bachelor's degree (B.S.) in Computer Science or related field Experience in a QA role in the software industry and solid knowledge of the software development life cycle (SDLC) Closely collaborative experience working with a team developing SaaS applications. Great team player who works with multiple teams to develop complex software applications. Experience following an Agile methodology. Comfortable working in a distributed team environment 4-to-7 years of experience in QA and test automation Scripting or development experience in one or more utilities or languages Experience building test frameworks in any of these or similar frameworks: JMeter, Protractor, Cypress, TestCafe, etc. 2+ years of Web UI automation testing using tools like Selenium. Experience with Azure DevOps CI/CD pipeline testing and deployment process Experience in DevOps tools like Azure DevOps, Jenkins, Maven, Git Work Location: US Based Remote. Occasional US Based travel will be required. Our teams operate on the Eastern time zone regardless of geographic location. Our Values: Customer inspired. Solutions-first. One team. Impactful experts. We look forward to hearing from you! Don't meet all the requirements? We're all on a journey to learn constantly and have areas to develop. If you bring some of the above skills to the table and are still developing in others - APPLY ANYWAY! Learning and experience isn't a one-way path, if you believe you have the background needed to make an impact in this role, we'd love to hear

from you. FSI is an Equal Opportunity Employer: We are committed to fostering a diverse, inclusive environment and to encourage these values in everyone on our team. We provide an environment of mutual respect where opportunities are available without regard to race, color, religion, sex, pregnancy (including childbirth, lactation, and related medical conditions), national origin, age, physical and mental disability, marital status, sexual orientation, gender identity, gender expression, genetic information (including characteristics and testing), military and veteran status, and any other characteristic protected by applicable law. We believe that diversity and inclusion for people from all walks of life are key to our success as a company.   Powered by JazzHR
