About the Role

OSTTRA India

The Role: Senior Product Analysis and Design Specialist

The Team: The OSTTRA Technology team is composed of Capital Markets Technology professionals, who build, support and protect the applications that operate our network. The technology landscape includes high-performance, high-volume applications as well as compute intensive applications, leveraging contemporary microservices, cloud-based architectures.

The Impact: Together, we build, support, protect and manage high-performance, resilient platforms that process more than 100 million messages a day. Our services are vital to automated trade processing around the globe, managing peak volumes and working with our customers and regulators to ensure the efficient settlement of trades and effective operation of global capital markets.

What's in it for you:

As a Senior Product Analysis and Design Specialist, you'll be working closely with product owners, development, QA and operation teams in an Agile and/or waterfall environment. You will be expected to solve complex problems and provide solutions to a range of clients utilising our existing platform offerings. As a key member of the team, your duties will include but not be limited to; analysis of client issues and new requirements, specification and design of effective solutions in a timely manner, verification of solutions in cooperation with QA engineers. You will be expected to become an SME of the product platform and

areas you work on.

The successful candidate must be willing to actively engage in continuous improvement of OSTTRA platforms and assist in gathering stakeholder feedback while maintaining a hands-on understanding of our product offerings and experiences.

Responsibilities:

We're looking for a Business Analyst to work within our product team focusing on our derivatives multi-asset class buy-side platform. Within this team you will:

Assist in requirements gathering and business analysis

Translate the business requirements into functional specifications, capture user interactions, user interface specifications (screens and windows), outputs (reports and forms), API interfaces and general systems requirements; assisted by the Development Lead where appropriate

Assist the Development Lead in understanding business requirements and functional specifications

Assist in identifying options for potential solutions, including assessment of technical and business suitability

Work with QA and Development teams during testing to ensure the implementation meets the design and requirements

Provide functional expertise and interface to the business and operations teams during external testing phases

Write product documentation, including end user documentation

Respond to escalations from client facing teams regarding production issues

Work with team members in a multi-office, multi-country environment

With an entrepreneurial spirit, be willing to take on additional responsibility quickly.

What We're Looking For:

Bachelor's degree, ideally in a technical or finance field

3 yrs+ hands on business analysis experience in a professional environment

Experience of Requirements Elicitation, using various business process modelling techniques

Excellent verbal and written communications skills including experience writing business requirements, functional specifications, system test plans and end user documentation

Demonstrated knowledge and experience with SQL and some relational database system

Experience in financial services industry is a significant plus

Detailed and thorough approach to problem solving.

Experience working with a diverse group of users in a multi-office, multi-country environment

Highly motivated, self-directed team player with strong client service, communication and analytical skills

Entrepreneurial mindset and ability to multitask are a must

Superior academic record and leadership qualities

Bonus Points: FpML knowledge, experience with OTC derivatives, familiarity with OSTTRA platforms, awareness of or involvement in regulatory projects MIFID, EMIR, Dodd-Frank, SFTR, etc.)

The Location: Gurgaon, India

About Company Statement:

OSTTRA is a market leader in derivatives post-trade processing, bringing innovation, expertise, processes and networks together to solve the post-trade challenges of global financial markets. OSTTRA operates cross-asset post-trade processing networks, providing a proven suite of Credit Risk, Trade Workflow and Optimisation services. Together these solutions streamline post-trade workflows, enabling firms to connect to counterparties and utilities, manage credit risk, reduce operational risk and optimise processing to drive post-trade efficiencies.

OSTTRA was formed in 2021 through the combination of four businesses that have been at the heart of post trade evolution and innovation for the last 20+ years: MarkitServ, Traiana, TriOptima and Reset. These businesses have an exemplary track record of developing and

supporting critical market infrastructure and bring together an established community of market participants comprising all trading relationships and paradigms, connected using powerful integration and transformation capabilities.

About OSTTRA

Candidates should note that OSTTRA is an independent firm, jointly owned by S&P Global and CME Group. As part of the joint venture, S&P Global provides recruitment services to OSTTRA - however, successful candidates will be interviewed and directly employed by OSTTRA, joining our global team of more than 1,200 post trade experts.

OSTTRA was formed in 2021 through the combination of four businesses that have been at the heart of post trade evolution and innovation for the last 20+ years: MarkitServ, Traiana, TriOptima and Reset. OSTTRA is a joint venture, owned 50/50 by S&P Global and CME Group.

With an outstanding track record of developing and supporting critical market infrastructure, our combined network connects thousands of market participants to streamline end to end workflows - from trade capture at the point of execution, through portfolio optimization, to clearing and settlement.

Joining the OSTTRA team is a unique opportunity to help build a bold new business with an outstanding heritage in financial technology, playing a central role in supporting global financial markets.
