What You'll Get to Do

CACI is looking for an experienced and proven Software Technical Lead to design, implement, and maintain critical software systems on an open and flexible architecture, along with accompanying mission applications, from development through delivery. The Technical Lead will manage an agile development team to maintain and update current financial applications as well as build a new architecture and establish/implement development standards to ensure the new solution stays efficient and sustainable. The role involves staying up to date with latest technologies for future upgrades and guiding the team in the direction best suited for future efforts.

We need someone with strong communication and organizational skills and the ability to properly prioritize and multi-task. The team works in a remote setting that will require you to communicate effectively, focus and self-motivate along with ensuring your direct reports are doing the same. You must be able to work collaboratively with all teammates and remain flexible and adaptable to changing priorities and deadlines in a fast-paced environment. As the Technical Lead you will oversee the technical team and provide guidance and support along with career growth opportunities. Additionally, you will work closely with Leadership to provide input on strategy, planning and execution of program initiatives along with ensuring team processes are identified/updated and being followed and project deliverables are being

met. This role requires you to be able to work independently and help drive work forward all while managing your direct reports' priorities, your own priorities and priorities of the program.

RESPONSIBILITIES:

Lead the design, development, and implementation of Web-enabled applications using a variety of technologies

Research, Design and develop complex enterprise-level web applications built on relational and unstructured databases

Transform complex customer requirements into functional and sustainable solutions

Utilize open source software development kits and API's to rapidly develop basic application solutions

Monitor application servers and rapidly troubleshoot and fix performance or functionality issues that arise

Ensure team performs root cause analysis to ensure proper action and support continuous improvement

Adapt off-the-shelf solutions to meet government customer needs and requirements

Work in a collaborative agile team environment

Conduct code reviews to assess code quality and ensure alignment with standards

Establishes processes for technical team and ensures follow through

EDUCATION & EXPERIENCE:

Typically requires bachelor's degree or equivalent; and 7 to 10 years of related work experience.

Minimum 10 years software experience, with 5 years in an engineering lead role on IT or software application projects

REQUIRED:

Experience leading complex technical projects from design to production

Ability to effectively prioritize and execute tasks in a high-pressure environment

Strong customer service skills and customer relationship management experience

Familiarity with Agile software development methodology, processes, and techniques

Ability to learn at a fast pace and be able to rapidly learn and leverage third-party tools, SDKs, and APIs

Excellent organization, communication and writing skills, and the ability to express technical concepts with regard to strategy, implementation and design of application environments

Excellent teamwork and collaborative skills, with the ability to lead and manage the effort of others when necessary

Demonstrated experience in Web Server technologies (Tomcat, Web Logic, IIS)

Experience with data-driven applications

U.S. Citizen eligible to attain a DoD secret clearance.

NICE TO HAVE

Experience with simple Database Administration techniques a plus

Experience designing, developing and deploying software in a cloud environment (AWS is a plus).

Experience developing and deploying software in a DoD environment
