Company: YoungWilliams

Location: United States

Category: computer-and-mathematical

Summary of Position

The Software Engineer V will provide technical leadership by working both across and within the agile development team throughout the full development life cycle. This role will create architectural approaches for software design and implementation to guide the development team. The Software Engineer V will act as a decision maker on the team, determining everything from design choices to technical standards while bringing industry best-practices and technology trends into the software platform.

Essential Job Requirements

Works with the technology leadership to define and own architectural best practice design for software solutions.

Provides a framework for the development of software and systems that will result in high quality solutions.

Evaluates and recommends tools, technologies, and processes to ensure a good product design and implementation.

Provides technical guidance and coaching to development team members on best practice and patterns, development techniques, and principles and processes.

Ensures software meets all requirements of quality, security, modifiability, and extensibility.

Brings issues and problems proactively to the attention of the team; generating, proposing, and implementing innovative solutions to solve them.

Identifies and helps reconcile inherent conflicts between high-level objectives, systems architecture, and functional requirements.

Seeks to eliminate repetition by championing and implementing automation. Advocate and help progress the team to Test Driven Development, Continuous Integration and Continuous Delivery

Troubleshoots code level problems quickly and efficiently.

Contributes to the predictable delivery of quality releases.

Delivers quality code while meeting scope objectives on a deadline.

Other duties as assigned.

Required Education/Certification

Bachelor's or master's degree in software engineering, computer science, or equivalent work experience.

Required Experience

Ten + years of proven experience as a Software Engineer or related role with a strong track record of successful Software Development projects.

2 + years' experience in an IT leadership position on a development team

Experience in designing and developing a unified vision for software.

Experience with software development lifecycle processes

Experience working on complex software projects.

Data modeling and database design experience

Skills Required

Understanding of quality assurance principles

High quality organization and leadership skills

Outstanding communication skills

Knowledge of architectural styles and design patterns

Demonstrated analytical and critical thinking abilities.

Ability to think strategically and lead.

Ability to collaborate with cross-departmental personnel.

Ability to understand business concepts and issues as well as technical systems processes.

Proactive -think, plan and act ahead-anticipate problems and eliminate them before they arise.

Consistently at work and on time, ensures work responsibilities are covered
